

A high-contrast, black and white close-up photograph of a Brembo brake assembly. The image shows the intricate details of the brake caliper, including the pistons, pads, and the cooling fins of the brake disc. The lighting creates strong highlights and shadows, emphasizing the metallic textures and the complex engineering of the component.

BREMBO BRAKE ASSEMBLY

Merlin Farnham,
Nicholas Coleman

WHAT IS BREMBO?

- Brembo is a company that deals mainly in two categories. One is selling to OEMs to put in their motorcycles or sports cars. The other category is where Brembo will sell to aftermarket manufacturers who modify production vehicles or make unique one-off projects.
- We'll dive into their OEM portion of their company. Typically, when Brembo sells to B2B customers, they sell the entire brake assembly. This would include the calipers and discs, as well as their brake pads.

We're proud to partner with Brembo across all Polestar Performance variants. With over 50 years of motorsport heritage, **Brembo** braking systems have set the standard for control, both on the track and on the road.

"Braking is where speed really begins. True performance isn't only how fast you go, it's how confidently you can stop," Matteo Rampazzo, Market Director at Brembo.

The Subaru STI is back. And Brembo is right alongside it. Chosen as the technical partner for the braking system of the new Subaru STI S210, Brembo confirms its role as a solution provider for high-performance cars, offering tailor-made solutions that combine racing technology, reliability, and style. An icon returns, with a detail that makes the difference: the legendary STI badge is flanked by the Brembo logo on the brake calipers, a symbol of a technical collaboration that unites sporting heritage and the highest level of performance. <https://lnkd.in/d6FXqVex>

ANNOUNCEMENTS

WHO DOES BREMBO SELL TO?

**Original Equipment Manufacturers
of automotive vehicles**

Pat K is a **Procurement Officer** at a major automotive manufacturer. He wants to implement a new braking system in their next generation of a luxury sports car, but he doesn't want to break the budget. Wants to keep up with the latest technology and align purchases with brand values.

Veronica P is a **Vehicle Safety Engineer** at a major automotive manufacturer. She wants a braking system that is known for its standard of safety and efficiency without sacrificing visual aesthetics. Looks for quality and reliability.

WHAT MAKES BREMBO UNIQUE?

Brand Recognition to
consumers.

UV coating, which keeps
the discs looking fresh and
prevents rust from forming.

Best-in-industry carbon
ceramic brake
manufacturing.

HOW DOES BREMBO MESSAGE THEMSELVES?

Brembo Archetypes identifies itself as a “Hero” brand, representing the mastery they have created with their braking system.

Their messaging doesn't change as they sell this assembly to different automobile companies.

WHAT DOES BREMBO DO WELL?

Wonderful use of motorsports as Proof of Credibility as shown in Formula 1, Moto GP, and WEC/Endurance racing.

They have a massive brand value and recognition through both business and consumer eyes. More recently, they have become the dominant performance brake manufacturer in the industry, and in the eyes of consumers, they are the cream of the crop. This will entice businesses to partner with Brembo.

WHAT CAN THEY DO BETTER

If they don't change anything with the way they produce their brakes, there are things they can change with their marketing.

Provide more case studies in their return on investments, as well as more customer testimony.

Brembo could start advertising more in their EV market, and how their brakes help and advance cars into the future.
